TIM HARTNELL'S PROGRAM PRESENT
YOUR BIORHYTHMS
10 PIN BOWL
Your computer

. . . an innovative new series of specialist magazines for today's homemakers . . .

THE Lifestyle SERIES

Are you looking for inspiration and information on ways to improve your home — design a new kitchen or bathroom, plan your outdoor living area or decorate the children's room? The Lifestyle Series has all the answers. Forthcoming titles include: ● *Bathrooms* ● *Swimming Pools* ● *Outdoor Living* ● *Bedrooms and Children's Rooms* ● *Apartments* ● *Renovations and Restorations*

● *Look for these exciting titles — at your newsagent now*

LIFESTYLE, THE SERIES THAT GIVES YOU MORE — MORE IDEAS, MORE INSPIRATION, MORE INFORMATION

Tim Hartnell's PROGRAM PRESENT from Your Computer

Welcome to our Christmas Program Present!

NOW YOU'VE GOT AN EXCUSE not to lie on the beach all summer, showing that flab you've acquired through overindulgence in festive fare. With the programs in this special Christmas bonus,3 you'll have lots of reasons to stay inside, getting a suntan in the glare of your monitor screen.

Just for Fun

Next we have a number of programs *just for fun*. In this section you can dive into the sea with KAMIKAZI PARACHUTE!, clock up a strike or three with TEN-PIN BOWLING, try out your skill against the fiendish computer brain in DOMINOES, take up arms as a Yankee against the British in DANIEL MORGAN'S MILITIA, and win some synthetic money on our SUPER ZAPPO SLOT MACHINE (which is modelled on the behaviour of real slot machines, rather than just being some vague computer approximation).

Brain-Twisters and Simulations

When you've had enough of that sinful, just for pleasure stuff, you can exercise some grey matter with the board games GOMOKU, CONNECT FOUR, DRAUGHTS and OZ-THELLO. From there we move into Simulationland, in which you gain control of THE YOUR COMPUTER ROBOT, which leaves interesting patterns behind it as it strolls around your screen (somewhat like a slimy snail, I guess) and LIVIN' IN THE LODGE, in which you see how well you would do as Prime Minister of our sunburnt country.

Know Thyself

Then things get really serious, with our DOCTOR program (a very hefty version of ELIZA which I wrote to try and perform as closely as possible to the original, vast, mainframe one), THE CELTIC TAROT to see what 1987 holds for you, and our official BIORHYTHM CALCULATOR, which will back up the Tarot predictions with a little bit of weird science.

Artificial Stupidity

Just to show we haven't lost our marbles completely, you can give yourself a quickie medical checkup, with our very own drive-in, 24-hour clinic, MEDICI, and go a round or seven with our 'intelligent' NOUGHTS AND CROSSES game, which learns to improve its game as it plays against you.

Utilitarianism

If you want to know when Australia Day will fall in 1993 (and who doesn't?), THE YC PERPETUAL CALENDAR will tell you, and print out a calendar for 1987, 1993 or just about any old year you want. Let's see now, Easter in 1947 fell on the 22nd, so Aunt Mary must have gotten married on . . .

A Barrel of Fun

ALL IN ALL, there's a lot in this special bonus magazine, to ensure you make the most of your computer this summer. I've written the programs so that they will run, with minimum modification, on just about any computer on the market. You might need to modify the lines which contain RANDOMIZE in some way (or leave them out all together, if you like, as it won't make much difference), and you might want to play with the PRINT statements in some programs to make the most of your system's graphics capabilities.

And if the thought of all that typing is too much to bear, all the programs are available via the *Your Computer* Bulletin Board on (02) 953 8074. Alternatively, if you have an IBM PC, or a clone, I can provide you with a disk containing all the material in this magazine. Just send me a used fiver (or, if you must, your Visa or Bankcard details) to Interface Publications, 34 Camp Street, Chelsea 3196, Vic., and I'll send you a disk of the material.

Note that these programs are NOT *public domain, so they cannot be sold or distributed by anyone, other than downloading them from the bulletin board for your own use, or from my company on disk.*

OK, time to get down and get with it (as we tired old hackers are wont to say). Hope you enjoy our Program Present!

Tim Hartnell

BULLETIN BOARD NEWSFLASH

Believe it or not, for business or for pleasure, more spectacular than ever, the *Your Computer* Bulletin Board is back with Bells on.

Find that hard (disk) to imagine? Well, how else would we be able to share our **50-plus megabytes** of neatly catalogued **public domain software**. Even with our new whizz-bang ever-whirring fixed drive (yes, you heard right) we'll have to rotate all that soft stuff in 10 megabyte batches . . . Then we'll still have room to slap up:

☞ The regularly updated, cross-referenced, five-year index to *Your Computer* articles.

☞ Our database of the new products listed in the magazine each month.

☞ Sample programs from dLetter.

☞ Many of those useful bits of code we publish in the magazine - yours for the downloading.

And there'll be space for you to send us words of greeting, praise and bribery allsorts. Old-time users of the *YC* BBS, who've been on hold for the past few months, will also enjoy the

REVISED MESSAGING SYSTEM

NEW PHONE NUMBER - (02) 953 8074

NEW DOCUMENTATION

(Send us your name, address and member number, and we'll send you a copy.)

For showing extreme patience in the line of membership, existing users have been awarded at least six month's free access (depending on when you joined up), from this date.

Visitors are welcome, but are asked to observe dress regulations at all times.

Kamikaze Parachute!

IN THIS DRAMATIC GAME, you have to battle the fierce winds off the coast of Victoria, while attempting to land your parachute safely on a tiny landing pad floating on the waves of Port Philip Bay.

There are four levels of difficulty (from 'easy' to 'incredibly hard'). You use the 'Z' key to move the parachute to the left, and the 'M' to move it to the right. Make sure you engage Caps lock before you run this program. Miss the landing pad, and you'll drown.

Ten-Pin Bowling

THIS PROGRAM ALLOWS YOU to play ten-pin bowling (after a fashion) by testing your reflexes.

When you run the program, you'll see the pins shown from above (cunningly represented by hi-res letter O's). After an agonizing wait, the words BOWL NOW will appear. The more quickly you react to this message, by hitting any key on your long-suffering computer, the better your bowl will be.

The program keeps score automatically, and tells you how well you're doing. If you're feeling reflexive, and want to chuck a ball or two about, this program is for you.

Dominoes

FROM THE EMPTY CAVERN which represents the Tim Hartnell Inner Brain of Useless Knowledge, comes this fascinating fact: The present-day game of dominoes, which was probably developed in Italy around 200 years ago, is based on a Chinese tile game, invented centuries before the Italians got hold of them. And this program was invented about 20 minutes ago, as a silicon version of the Italian game.

To play dominoes, we use 28 oblong 'stones' or 'tiles'. Each tile is divided into two sections, and 'pips' (like the dots on dice) are placed on each section. The pips range from none (blank) to six. The dominoes are placed faced downward on a table, and each player selects seven tiles for his or her own use. The others are left on the table as the reserve, or 'bone yard' as it is quaintly known.

The computer has the first move (it's easy to change this so you can move first, if you like) and you then take it in turns to place your dominoes down, making sure that you put matching pips together (so that if the computer's first dominoe was 67, you could put down any dominoe which had a 6 or a 7 on it). Blanks count as any number. If you can't move, you enter a zero, and you'll be given an extra dominoe, from the 'bone yard'. The game ends when one of the players manages to get rid of all of his or her pieces, or when neither player can move.

You'll find the computer puts up a solid defence in this game.

Daniel Morgan's Militia

WAY BACK IN 1781, when Australia was just a gleam in Governor Philip's eye, the Brits were bashing hell out of the Americans in the War of Independence. The tide turned, however, in the Battle of Cowpens, when troops under the control of General Daniel Morgan scored a convincing victory.

In this program, you control Morgan's troops. There are ten levels of difficulty. The British are represented by numbers at the bottom of the screen, and they advance relentlessly towards you at the top. Your men are represented by a letter 'V' (classy graphics, huh?) and you move your men back and forth with the 'Z' key (to move to the left) and the 'M' key (to move to the right). You fire at the British by pressing the space bar.

Your score is related to two things: the numbers your shots destroy, and their position within the British ranks. There are four rows of British soldiers. The front row is worth the least, and those in the final row are worth the most.

Go get 'em, Daniel Morgan!

```

Super Zappo Slot Machine

IN THE 1930S IN AMERICA, the slot or fruit machine was considered by many to be a product from the devil's factory of devices designed to mislead men from the true path. If you look through yellowing American newspapers of the period, you'd be tempted to think that all politicians did for publicity in those days was attack slot machines with an axe — whenever a photographer happened to be present.

The 'evil' of the slot machine lies in the gross ease with which the machine is played. You put a coin (or token) in a slot, and press a button or pull a handle. The machine — the vast majority of the time — puts on a little display for you, with whirling images, lights and bells, and then eats your coin. Despite the illusion of interaction created by the fact that the player starts the little display by pressing a button or pulling a handle, and additional buttons with names like 'Nudge', 'Wink, wink' and 'Hold', a particularly dumb robot or a trained pigeon, rat or rabbit could play the machine as well as you can.

In a test conducted a few years ago by a Sydney newspaper, 10 machines were tested, one in each of 10 different locations. In the test, 1000 coins were played through each machine, and any winnings were set aside (that is, they were not fed back into the machine). In the 10,000 coins played, not a single jackpot was recorded. The worst return was 62%, with 84% as the best. Further, the player was temporarily ahead on only two of the machines.

Why would anybody play such machines, given such dreadful odds? Who knows? This program will enable you to play for as long as you like, and lose as much as you like. It is a three-reel machine, which behaves like a genuine three-reel Vegas machine, with the likelihood of particular symbols appearing strictly in accordance with true slot machine odds. *Play on, sucker.*

Oz-thello

INVENTED IN THE LATE eighteen hundreds, Oz-thello is played on an eight by eight checkerboard. When played on a board (as opposed to being played within a computer), you use pieces which have different colours on each side. The game begins with four pieces placed on the centre squares.

From this point on, you move by placing one of your pieces next to a computer piece or pieces, with one of your pieces further on. When that happens, all the computer pieces 'reverse' to become your pieces.

Here's how it works. Suppose a line of pieces looked like this:

OXXXX

and you decided to put your piece (the O) at the end of the line like this:

OXXXXO

The computer pieces would reverse, so the line looked like this after your move:

OOOOOO

The game continues until every square on the board is filled, or neither player can move. As you can see, fortunes can change swiftly in this game, as rows branching off your position (such as on the diagonals) can be changed with a single move. If you cannot move at any time, you signal this to the computer by entering a zero. Other moves are entered by typing in the co-ordinates of the square into which you wish to place your piece. Oz-thello was written by Graham Charlton.

```
      COMPUTER IS X
        HUMAN IS O

     1 2 3 4 5 6 7 8
  1  . . . . . . . .  1
  2  . . . . . . . .  2
  3  . . O . . . . .  3

Connect Four

IN THIS GAME, TWO players take turns placing pieces in the lowest available position in the columns on a game board, trying to be the first to get four of their pieces to form a line in any direction.

The program, written by Tony Pearce, plays extremely well, and will prove a difficult, almost impossible, opponent to defeat. It assigns a value to each possible move, and then evaluates each of these moves in terms of whether or not this will help win the game. It then selects the move with the best potential.

In the program as listed, your pieces are shown as an 'o', and the computer's pieces as 'M' (for 'machine', I think). If you want to change them, simply modify line 140, with C$ being the computer piece, and H$ the human piece.

Gomoku

YOU'LL FIND GOMUKU an easy game to learn, but one which is almost impossible to win. The computer plays extremely well (if a little *s-l-o-w-l-y*) in this program, which is based on one written by Graham Charlton, the programmer who produced Oz-thello.

You have to try and get five of your pieces (the 'H') in a line in any direction, while the computer is trying to do the same with its pieces (the 'C').

Notes and Ideas –

Notes and High Scores –

Draughts

THIS PROGRAM, WHICH I wrote when holidaying in Wales (how's that for country-dropping!), puts up a fair defense for most of the game, then often collapse at the end. You might be able to beef up its end play.

When the game begins, you're at the bottom of the screen playing up, and the computer is at the top playing down. As the program is currently set up, the computer always has the first move. If you want the first move, simply delete line 60. Your pieces are the H's, and the computer's pieces are C's. Your kings are K's, and the computer's kings are $'s.

Notes and Ideas –

Modern fishing MAGAZINE
TELLS YOU ALL!

The Your Computer Robot

The YC Robot can follow a series of commands you type in, using a language we invented just for the program, called Robot Control Language (or 'RCL'). You enter the program, then put your commands in the lines 50 to 220, and then run the program. The 'robot' will then carry out your instructions.

In mid-1983, Muse Software of Baltimore, USA, released a superb robot simulation program under the name of Robotwar. This program allows you to pre-program a number of robots, before setting them loose on a computer-screen battlefield to fight it out for victory. Robotwar allows you to program the robots in a language which is essentially English, with a few BASIC commands (such as GOTO and GOSUB) thrown in.

Our program, The Your Computer Robot, is much simpler than Robotwar, yet still produces satisfying, and surprisingly interesting results.

There are twelve commands in RCL, any of which can be abbreviated to the first two letters. The RCL program is included within the overall BASIC program, as a set of up to twelve DATA statements, terminated by a DATA statement which just contains an asterisk. These DATA lines are kept near the beginning of the program. The current line which is being processed appears at the top of the screen as the program is running, so you can see the relevant line and its effect, as it occurs.

Here is the complete vocabulary of RCL:

START (which can be abbreviated to ST) – start again;

PRINTOUT (PR) – stop the robot action, clear the screen, and print out the current situation before continuing with the run;

FORWARD (FO) – this is followed by a single number, and it tells the robot to move forward by the number of 'steps' or 'spaces' indicated by the number which follows the command;

BACK (BA) – this is the opposite, naturally enough, of FORWARD;

```

530 N$=LEFT$(M$,2)
```

The Your Computer Robot

TURN (TU) – followed by a number, this command turns the robot through the specified number of degrees (more or less); it starts a run at zero degrees, with zero being considered as facing the top of the screen;
HOME (HO) – returns the robot to the centre of the screen, facing upwards;
CLEAN (CL) – cleans the previous steps away (the action of this command, like the others, will become clear once you use it);
GO – this is followed by two numbers, which are the co-ordinates to which the robot moves without leaving a trail between its old position and the new one;
RANDOM (RA) – this moves the robot to a randomly chosen position on the screen; it acts as a random GO;
REPEAT (RE) – followed by a number, this command allows you to cycle through a section of a program a specified number of times before continuing. This can produce some fascinating effects, as you'll see;
END REPEAT (EN) – terminates the REPEAT cycle. All the RCL commands which lie between REPEAT and END REPEAT will be cycled through the number of times specified;
FACE (FA) – followed by a number, this turns the robot to face an absolute angle, with the top of the screen as zero degrees (in contrast to FACE, the TURN command is relative to the current angle at which the robot is facing);

So — to use the Your Computer Robot, just enter your commands in the lines 50 through to 220 in the program.

Here are some sample programs — For an octogan:

```
GO 11,35
REPEAT 8
FORWARD 4
TURN 45
END REPEAT
PRINTOUT
*
```

```

```

▷

The Your Computer Robot

To get diamonds:

```
RANDOM
FACE 45
REPEAT 4
FORWARD 2
TURN 90
END REPEAT
PRINTOUT
START AGAIN
*
```

To print out a square:

```
GO 11,35
REPEAT 4
FORWARD 6
TURN 90
END REPEAT
PRINTOUT
*
```

For a random design of octagons:

```
RANDOM
REPEAT 8
FORWARD 2
TURN 45
END REPEAT
PRINTOUT
START AGAIN
*
```

To print out my initials, I wrote this little RCL program:

```
GO 6,10
FACE 90
FORWARD 7
GO 8,26
FORWARD 5
PR
GO 6,16
FACE 180
FORWARD 6
GO 6,26
FORWARD 6
GO 6,34
FORWARD 6
PRINTOUT
*
```

With these examples to get you underway, you're sure to be able to create some pretty interesting designs of your own.

```

Notes and Ideas –

Livin' in the Lodge

They say that in Australia, politicians are considered to be the third worst form of life (just above child molesters and journalists). Most of us feel, from time to time, we could do a better job than those daring to run our lives from Canberra.

Well, here's your chance to prove your political skills. With this program, you move into the Lodge in Canberra to run the country. To retain your popular support (and the number one job in the country), you have to keep Australia together. You need to do your best to improve the standard of living, keep inflation and unemployment down, stimulate private investment, and generally maintain an acceptable growth in the economy, all at the same. You'll soon discover the wisdom of the words of one former occupant of the Lodge: "A Prime Minister's life wasn't meant to be easy".

The population of Australia is around three million when you begin, and unemployment will be hovering around 10%. You'll be asked to make some snap judgements on levels of government spending, the cost of wages, and on your current immigration policy. To take part in this program, you have to be the ACTU, the Prices Surveillance Authority, the New Right, the Industrial Tribunal, and the Department of Immigration and Ethnic Affairs, all at the same time!

You'll soon find that, no matter how good your intentions, it is a very difficult juggling act to control.

The Doctor is In

You probably know about the famous ELIZA program, which imitates the action of a particularly dumb psychiatrist. Now you can sample it in action, with our program DOCTOR. This is the third version of ELIZA I've written, and — as far as I can ascertain — is more comprehensive than any other published version of the program.

Here's a sample conversation with the Doctor:

```
THE DOCTOR IS IN . . . PLEASE STAND BY

WELCOME TO ANOTHER SESSION WITH
THE DOCTOR

HELLO . . .

>? HI THERE DOC

HI TO YOU . . . RELAX NOW, AND LET'S
TALK ABOUT YOUR SITUATION

>? I HAVE A SERIOUS PROBLEM

HOW CAN I HELP YOU WITH A SERIOUS
PROBLEM

>? IT IS TO DO WITH MY MAD TEACHER

ARE YOU CERTAIN THAT IT'S TO DO
WITH YOUR MAD TEACHER

>? YES I AM VERY CERTAIN

YOU'RE PRETTY POSITIVE

>? IT COMES FROM WRESTLING WITH IT
DAY AND NIGHT

EARLIER YOU MENTIONED YOUR MAD
TEACHER TELL ME MORE ABOUT THAT

>? IT STARTED WHEN I WAS TEN YEARS
OLD

THAT'S VERY INTERESTING
```

```

>? I WANT SOME ASSISTANCE WITH MY FEARS

WHAT WOULD IT MEAN TO YOU IF YOU GOT SOME ASSISTANCE WITH YOUR FEARS

>? I THINK IT WOULD MAKE ME BRAVER

DO YOU DOUBT IT WOULD MAKE YOU BRAVER

>? I ALWAYS WANT TO RUN AWAY

ISN'T 'ALWAYS' A LITTLE STRONG?

>? I GUESS IT MIGHT BE

WHY DON'T WE GO BACK AND DISCUSS YOUR FEARS A LITTLE MORE?

The Celtic Tarot

Once you've sorted yourself out with the help of the Doctor, you can use our next program, The Celtic Tarot, to see what the future has in store.

There is no need for you to learn what each Tarot card signifies in order to use this program. Of the many ways of using and interpreting the Tarot, I've chosen the method called 'The Celtic Cross'. According to the book Predicting the Future, by the Diagram Group, the "Celtic Cross is probably the most useful and versatile of all tarot spreads".

To use it, you just enter a question, such as WOULD IT BE WISE TO CONSIDER BUYING A NEW WIND SURFER, and the program will deal some cards, and comment on them, in light of your question.

```
ENTER YOUR QUESTION OR CONCERN NOW
AND I WILL USE THE CELTIC CROSS SPREAD
IN AN ATTEMPT TO GIVE SOME GUIDANCE...

? WOULD IT BE WISE TO ATTEMPT TO MAKE A
  MILLION DOLLARS DURING 1987
```

The Biorhythm Calculator

What does 1987 hold in store for you? While you may not, perhaps, wish to rely to much on the insights gained from our Celtic Tarot program, the 'science' of biorhythms may tell you much more.

In this program, written by Ian Hutt, you just enter your date of birth, the current month and year, and the program cleverly charts your physical, mental and emotional peaks and troughs for the coming month. Note that in lines 210 and 220, you may need to change the 80 and 24, into the number of characters across on the screen (the 'line length') and the number of lines the screen can hold (the 'page length'). This ensures that the printed chart will fit properly on your screen.

```
PLEASE ENTER YOUR DATE OF BIRTH:

     MONTH (1 to 12)? 3
     DAY   (1 to 31)? 17
     YEAR  (AS 1988)? 63

PLEASE ENTER THE CURRENT MONTH, YEAR:

     MONTH (1 TO 12)? 4
     YEAR  (AS 1988)? 87

PLEASE STAND BY WHILE I WORK IT OUT...
```

Notes and Ideas –

ARTIFICIAL STUPIDITY

AN ENORMOUS AMOUNT *of energy is now being spent to get computers to behave in ways which appear stupid.* Artificial Stupidity (AS) *research has looked into many of the simple human exhibitions of stupidity, such as games playing. This research has produced some outstanding and important results, such as those toy bears which grunt back at you when you grunt at them, and computers which refuse to recognise the command* LUST *for* LIST, *or* RUIN *for* RUN.

In this section of our Program Present, *we'll look at two prime examples of* AS.

Medici — Personal Checkup

Instead of going to a doctor, you can save Medicare lots of money, and use our Medici program to see how long you are going to live. Just answer the questions, and Medici will give you an estimate of your lifespan. Note that the results should be taken with a pinch of salt (but not too much, because salt is bad for your blood pressure).

Intelligent Noughts and Crosses

Our 'intelligent' Noughts and Crosses program develops a playing strategy as it runs. When you first run it, the program knows how to play the game, including enough knowledge to try and block a row of three being made by an opponent, or to complete its own row of three. But it knows nothing else about the way it should play. It doesn't even know that it should move into the centre position if it is free.

But play a few games with it, especially letting it win for a while, and it will quickly develop some strategy. As well, it shows you the relative values it has given to each position on the board, after each game, so you can actually see it learning.

Here's the board layout:

```
1 : 2 : 3
---------
4 : 5 : 6
---------
7 : 8 : 9
```

When I ran this program against an opponent playing totally at random, it took only 12 games before it had learned that position five, the central one, was the most valuable one on the board. You should see a similar quick development in its strategy when you play. If you want to set up a 'random opponent', just add those additional lines number 2000 to 2070, headed RANDOM OPPONENT, and change line 190 into GOSUB 2000. Then settle back and watch Artificial Stupidity in action.

```

OFFICIAL AMERICA'S CUP MAGAZINE
ON SALE NOW!
modern boating
TWENTY-ONE YEARS AT THE TOP!
★ The longest established boating magazine in Australia. The top selling power and sail magazine. And simply the largest. However, you take your recreation afloat, Modern Boating has been there for twenty-one years with the race reports, the interviews, the boat tests, the updates on equipment and technology. From the top writers and photographers here and abroad. ★
